

PET Straps Manufacturer In India

, Madhya Pradesh
India

We are market leader and a renowned PET traps Manufacturer in India. We are also Pet straps Exporter and Supplier of PET straps and have an inventory of PET straps with wide specifications. We offer PET Strap that are manufactured from superior quality PET Chips and PET Flakes which are quality tested. Our PET straps are well-acclaimed across the globe due to their excellent tensile strength & welding strength and optimum quality.

Our state of art infrastructure and machines enables us to manufacture pet straps which are fabricated using advanced technology to meet high industrial standards at par with international quality. Quality production line supported with skilled quality conscious manpower we are capable of exporting and supplying bulk quantities of high grade PET Straps various industries.

Features And Advantage PET STRAPS Over Conventional Steel Straps

PET Straps are economical In use for packaging : Due to low weight of PET straps as compared to Steel straps for packaging makes it more economical and reducing the freight cost and easy handling Corrosion Proof : PET strap is rust free and resistance to chemical corrosive action which makes it more durable and long lasting also PET straps does not leaves any packaging stains on the pack Safety In usage of PET straps : Any steel straps consist of sharp dangerous edge which can result in injuries like cut to person handling the packaging operation, since PET straps does not consist of any sharp edges as compared to steel straps its always much safe for use and packing operation. PET strap create a safe work environment for user because it does not 'Spring back' when removed, So there is no risk of injuries while tensioning or cutting the strap Resistant to Impact : Impact resistance of PET strap is five times more than Steel Strap. PET strap possess higher Shock Absorbing capacity characteristic as compared to any steel strap these properties of PET straps makes it ideal for compressed rigid loads that require strapping tension through out handling & storage Elongation Recovery : PET strap has slight Elasticity so, it tries to return to their original position under tension. PET strap has good elongation recovery, while Steel strap has no elongation recovery. PET strap maintains strap tension by contracting with the pack in the event of pack settlement, where as steel strap may become loose if the pack configuration changes Printing : Printing on PET straps is easily possible which is almost impossible on steel straps at low cost PET Straps manufactured by us are used in various industries for

PET Straps Manufacturer In India

fulfilling the packaging needs and serves as most economical strapping materials used for packaging purposes. PET straps manufactured by us maintains all industrial norms and certification for developing flawless range of strapping products.
